

**AMENDMENTS TO THE SPECIFICATION**

**Please amend paragraph [0029] on page 13 of the specification as follows:**

[0029] The adhesive material 111 is provided so as to protrude from the surface of the placement side 110a slightly (by about 0.1 mm in the present embodiment). At this point, since the non-filling section 114 protrudes from the ~~filing~~ filling section 113 and also the adhesive material 111 has surface tension, the adhesive material 111 cannot be provided in the non-filling section 114.
